

Hello, I'm Vassilis, the little caretta-caretta and I'm going to teach you some simple ways to conserve water in your house!

First of all, water is in danger of pollution and waste. We must stop wasting it because it will run out soon.

## HOW TO PROTECT WATER

Water is very important for our lives. Water has many uses...

And now how to protect water...

Always turn off the tap when you are brushing your teeth or when you are soaping.

You can wash the fruits in a bowl and not under the running water.

Use the water that you have washed the fruits to water the plants.

Use the dish washer only if it is full.

If you use one cup for your drinks every day, there will be fewer dirty cups to clean.

Have a shower, not a bath.

Wash the car with a sponge, not with the hose.

If you have a small garden, water it with a watering can, not with a hose.

Water your garden in the morning or in the evening. If you water it at noon 60% of the water will evaporate.

Always check for any water leaks.

Use the washing machine only if it is full. Use eco-friendly cleaning products.

If you wash your dishes by hand, don't wash them under the tap leaving the water running. Fill up a basin with water, soap and wash them there.

These are some simple -but very good for the planet-ways to protect water in your house. If you try to follow these guidelines, then you will conserve a very large amount of WATER!
